OUTPROMPT

THE AI STRATEGY CHALLENGE

PROBLEM 2:

**REIMAGINE AN EVERYDAY
PRODUCT**

ROUND 1 SUBMISSION BRIEF

Your Task

Pick **one** everyday household product, consumer appliance, or personal electronic device that has barely changed in the last ~20 years. Reimagine it **end-to-end** - the product itself, the experience around it, and the business behind it - for the world of 2030.

“End-to-end” means you must think past the object: features and form, the UI / UX and the experience, who desires it and why, whether it can actually be built, what it costs, what it does to the supply chain, and how it goes to market.

The “Why Now” Gate

Your reimagination must clear one bar: you have to justify why your version is possible *now* when it wasn’t five or ten years ago. What specific shift makes it possible - a technology that got cheap or good enough, a behaviour that changed, a new material, a regulation, a cost curve? An idea that could have been built in 2010 and simply wasn’t does not count as a reinvention; it is a product that failed to launch. Name the specific unlock.

What a Complete Answer Covers

Whatever product you choose, work through three lenses - and take a clear point of view, not a list of options:

- **Desirability:** who is this for, what job does it do better than today’s product, and why would they switch? What is the experience - the form, the UI/UX, the feel?
- **Feasibility:** can it actually be built with what exists (or will exist) by 2030? What technology, components, materials, or capabilities does it need, and what does it do to the supply chain?
- **Viability:** what does it cost to make and to buy, how does the business make money (one-off, subscription, service, platform), and how does it go to market?
- **Scalability:**

Data You Can Explore

Bring your own evidence and cite it: bill-of-materials estimates, component cost trends, category market sizes, adoption data for comparable products, patents, reviews that reveal what users hate about the current product.

What Round 1 Is - and Isn’t

Working with AI is part of the job. Modern consulting increasingly expects you to work alongside AI, so that is the skill we are testing here. We are not looking for an answer solved unaided - we want to see how well you direct an AI towards a sharp recommendation, and how well you recognise where it falls short. So please do use AI to develop your response; it is expected, not optional.

Round 1 is analysis, not a build. You are not building a working prototype - that is Round 2. Concept sketches, mock-ups, or described experiences are welcome, but the deliverable is your thinking on the page.

Your Round 1 answer is **not binding**. If Round 2 changes your view, change it with no penalty - the two rounds are scored independently.
